

Superstore Performance Dashboard

Project Dataset

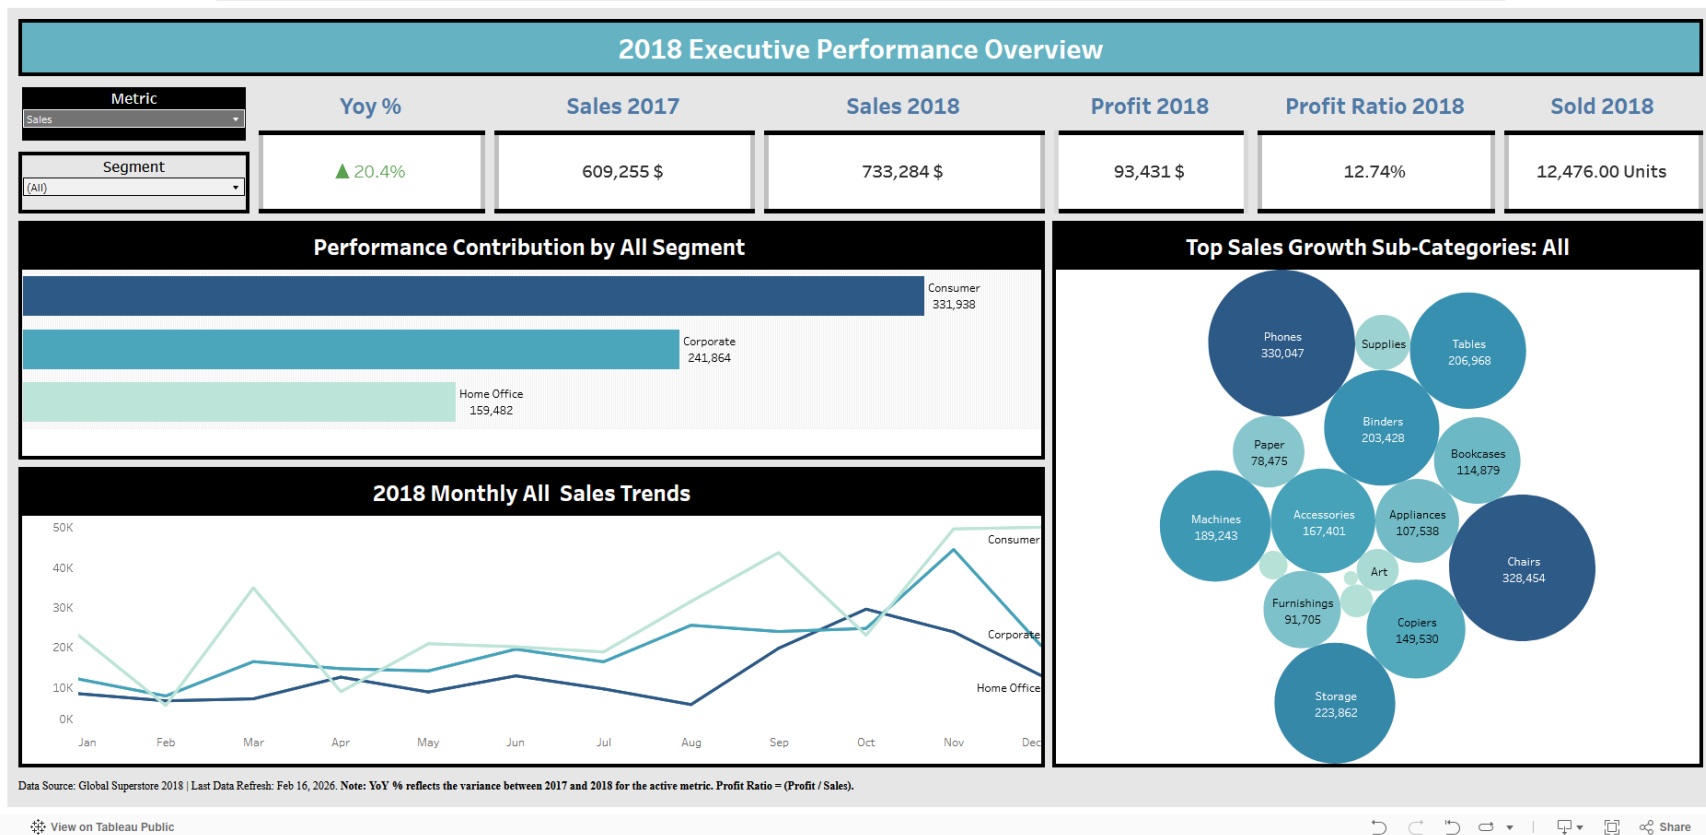

For this project, there is one dataset: **Sample-Superstore**. The dataset contains the following columns relevant to a mock superstore selling products in the broad categories of Furniture, Office Supplies, and Technologies.

1. **Order Date**
2. **Order ID**
3. **Product Name**
4. **Category:** Furniture, Office Supplies, Technologies
5. **City**
6. **Country**
7. **Customer Name**
8. **Discount: Percentage**
9. **Postal Code**
10. **Manufacturer**
11. **Profit: Dollar value**
12. **Profit Ratio**
13. **Quantity**
14. **Region: Global regions**
15. **Sales: Dollar value**
16. **Segment:** Corporate, Consumer, Home Office
17. **Ship Date**
18. **Ship Mode**
19. **State**
20. **Sub-Category**

Text Hierarchy

The text hierarchy for this dashboard was designed to facilitate rapid executive decision-making. By utilizing varied font weights, sizes, and color contrasts, the design establishes a clear "path of importance," moving from high-level KPIs to granular sub-category analysis.

Hierarchy Levels

Level	Dashboard Element	Typeface & Style	Rationale
Level 1	Dashboard Title	Tableau Bold, 24pt, White	Immediate Context: High-contrast white text on a dark teal banner ensures the user instantly identifies the report's subject matter.
Level 2	KPI Numbers (BANs)	Tableau Medium, 16pt, Bold	Core Metrics: These are the primary "Big Awesome Numbers." Large sizing allows for immediate scanning of 2018 year-end totals and YoY performance.
Level 3	Section Headers	Tableau Medium, 14pt, White on Black	Categorization: Uses "inverse" formatting (light text on dark background) to create clear visual "anchors" for the different analytical sections.
Level 4	Chart Labels & Axes	Arial, 10pt, Dark Grey	Data Support: Provides necessary detail for individual data points without cluttering the visual field or distracting from the primary trends.
Level 5	Annotation/Footer	Arial, 9pt, Grey	Secondary Metadata: Contains data source, refresh dates, and helper text (logic definitions). Placed at the bottom to remain accessible but out of the primary focus.

Color & Accessibility Logic

- **Semantic Color:** Green is used exclusively for positive YoY growth (e.g., the 20.4% increase) to provide an instant "good/bad" indicator without reading text.
- **Hierarchy via Contrast:** Darker backgrounds are used for titles to separate the "control" and "identity" areas from the "data" areas (white background charts).
- **Blue teal** was used as a theme throughout the design, alongside white and black colors.
